## *Instructions for JTBAL91B/G/W*

### **Basic Instructions**

The 9:1 balun is used for antennas that have a feed point impedance of about 450 ohms. This is useful for 450 ohm ladder line, end fed long wires, etc.

### **Specifications:**

Max power: 300 watts  
Connector: SO239  
Current Type  
Ratio 9:1  
1.8-30 Mhz

### **Safety Instructions:**

Do not install on a rainy or windy day.  
Do not install near power lines.  
Do not install by yourself, always have someone else near by to help.  
If antenna comes in contact with electric lines, do not try to remove. Call your electric company immediately.  
If you do not have experience at installing antennas, seek the help of a professional.
