Instructions for JTD40A

Included Items:

Dipole Assembly including center insulator, end insulators, copper wire.
100' - 3/16' Dacron Rope

Basic Instructions

Attach rope to center insulator. Attach rope to each end. Hang up in tree, tower, mast , etc.

You should have the dipole up in free space. The wire should not touch anything.

Dipoles may be installed in an inverted V, Flat top, or V shape. Each will have different radiation patterns.

Specifications:

Max power: 2000 watts
Connector: SO239
Center frequency: 7.2 MHz

Safety Instructions:

Do not install on a rainy or windy day.

Do not install near power lines.

Do not install by yourself, always have someone else near by to help.

If antenna comes in contact with electric lines, do not try to remove. Call your electric company immediately.

If you do not have experience at installing antennas, seek the help of a professional.
